

# Republic of Korea-Pacific Islands Climate Prediction Services Project

## Summary: February to April 2021 (FMA)

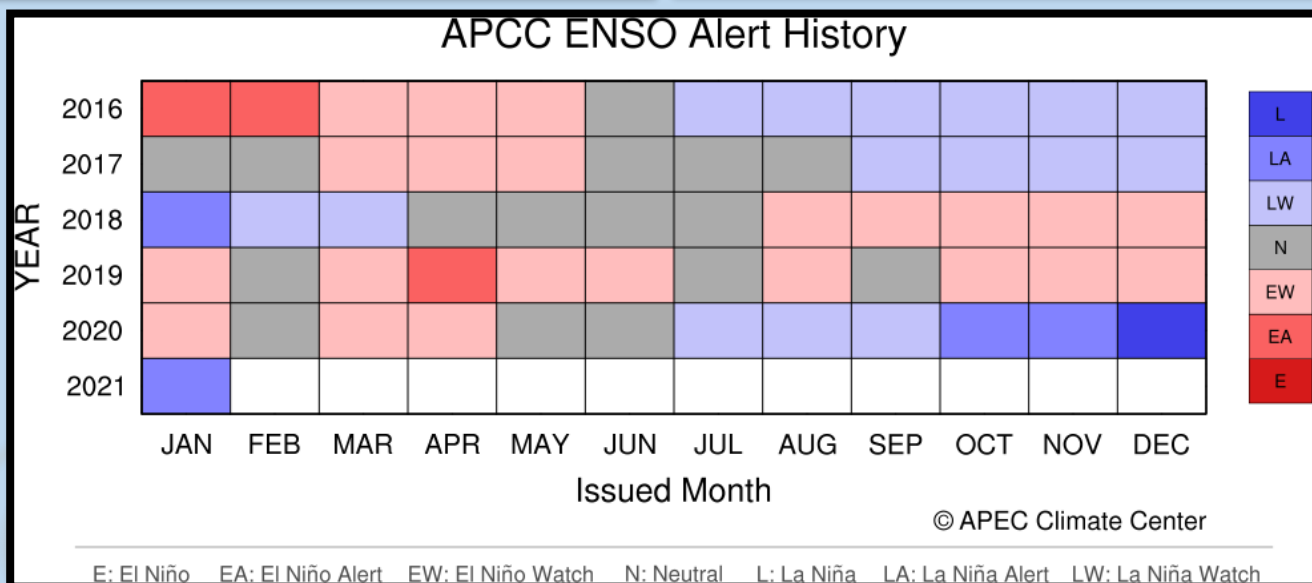

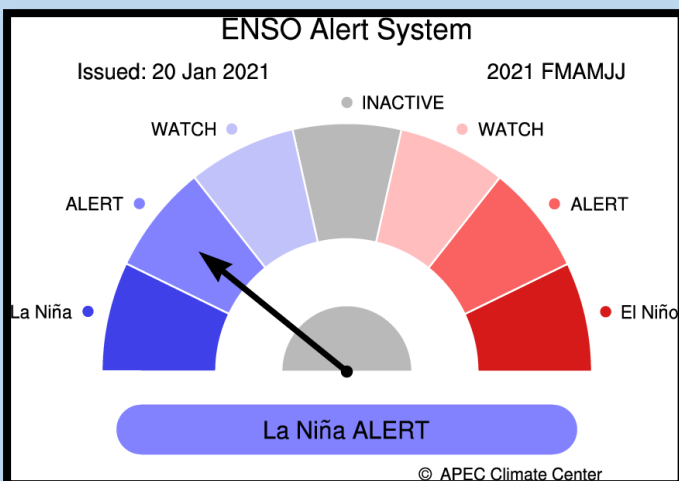

2021-01 Edition

## Climate Outlook for February ~ July 2021

- The APCC ENSO outlook suggests “La Nina ALERT”.
- The prevailing ENSO phase is expected to be negative to neutral. Negative SST anomalies along the equatorial Pacific are predicted during February - April 2021, and the intensity is likely to be weakened during May - July 2021. Along with these spatial distributions, most of the dynamical coupled models predict negative Nino3.4 index which is expected to gradually increase from  $-1^{\circ}\text{C}$  to  $-0.17^{\circ}\text{C}$  through the whole forecast period.
- In summary, based on the running 3-month mean Nino3.4 index, the APCC ENSO outlook suggests La Nina conditions (76% chance) with weak intensity are dominant during February - April 2021. The conditions are expected to gradually decrease and a 48% chance of neutral conditions is expected during May - July 2021.
- Please see <https://apcc21.org/ser/enso.do?lang=en> for more information

## ENSO

## RAINFALL OUTLOOK

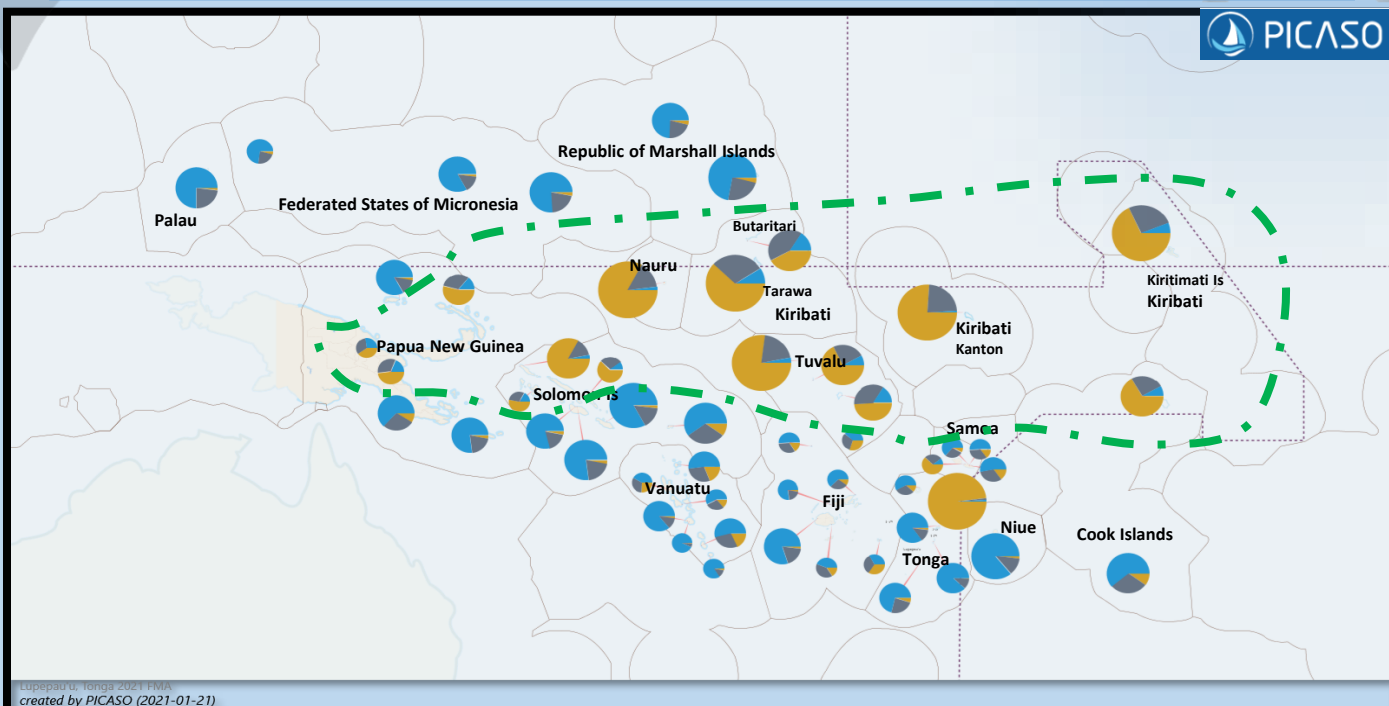

Model	PICASO	CLIK®
Status	COUNTRY (Area)	
<b>Above Normal</b>	<b>Cook Is</b> - (Rarotonga) <b>Fiji</b> – (Udu Point, Rotuma, Nabouwalu, Nadi Airport, Suva, *Ono-i-lau) <b>FSM</b> – (Yap, Pohnpei, Chuuk) <b>Marshall Is.</b> – (Majuro, Kwajalein) <b>Niue</b> – (Hanan Airport) <b>Palau</b> – (Koror) <b>PNG</b> – (Port Moresby, Momote, Misima,) <b>Samoa</b> – (Apia, Afiamalu, Lauli'i) <b>Solomon Is</b> – (Honiara, Henderson, Kirakira, Santa Cruz) <b>Tonga</b> – (Nukualofa, Lupepau'u, Haapai, Niuafoou) <b>Tuvalu</b> – (Niulakita) <b>Vanuatu</b>	<b>Cook Is</b> – (Rarotonga) <b>Fiji</b> <b>FSM</b> <b>Marshall Is</b> – (Majuro, Kwajalein) <b>Niue</b> <b>Palau</b> <b>PNG</b> – (Misima, Port Moresby, Nadzab) <b>Samoa</b> <b>Solomon Is</b> <b>Tonga</b> <b>Vanuatu</b>

## **Important:**

This publication is developed from information in PICASO and CLIK®, products of the Republic of Korea-Pacific Islands Climate Prediction Services Project (ROK-PI CliPS).

This resource is compiled to provide dynamical model data to support and complement information generated by Pacific Islands NMHS.

Contact your location Meteorology Service for site specific forecasts.

## **PICASO**

PICASO (Pacific Island Countries Advanced Seasonal Outlook) is a PC-based seasonal prediction tool tailored for the Pacific Island countries jointly developed by APCC and SPREP through the ROK-PI CliPS project.

PICASO produces probabilistic forecasts of the seasonal mean rainfall of the given weather stations by customizing the data from the APCC dynamical seasonal prediction multi-model ensemble.

## **CLIK®**

The rainfall and temperature forecasts are derived from a multi-model ensemble (MME) of all available Dynamical Models that are provided by WMO Global Producing Centers (GPCs) available on the Climate Services Toolkit for the Pacific (CLIK Pacific or CLIK®).

CLIK® is a product of the Republic of Korea-Pacific Islands Climate Prediction Services Project (ROK-PI CliPS).
