

Republic of Korea-Pacific Islands Climate Prediction Services Project Summary: June to August 2023 (JJA)

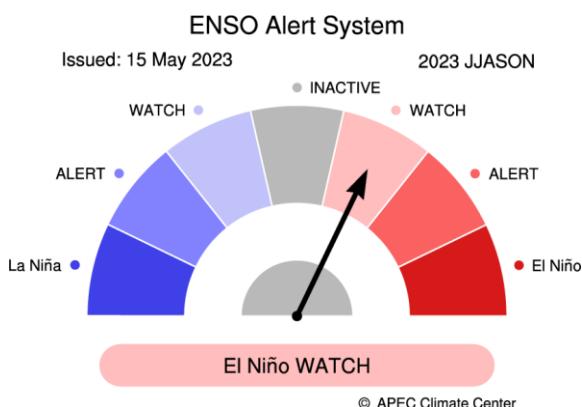

Climate Outlook for June ~ November 2023

- The APCC ENSO Alert suggests “El Niño WATCH”. In April 2023, above normal sea surface temperature anomalies spanned the eastern equatorial Pacific. The Niño3.4 index is expected to increase from 1°C to 1.7°C for June – November 2023. The probability for El Niño conditions is expected to be above 94% for the same period.
- Strongly enhanced probability for above normal temperatures is predicted for most regions of the Pacific Islands for June – November 2023.
- For June – August 2023, a strongly enhanced probability for above normal precipitation is predicted for Micronesia and the equator, and a strongly enhanced probability for below normal precipitation is expected for off-equatorial Polynesia. For September – November 2023, the chances are likely to weaken.
- Please see <https://apcc21.org/ser/outlook.do?lang=en> for more information.

Republic of Korea-Pacific Islands Climate Prediction Services Project

Important:

This publication is developed from information in PICASO and CLIK®, products of the Republic of Korea-Pacific Islands Climate Prediction Services Project (ROK-PI CliPS).

This resource is compiled to provide dynamical model data to support and complement information generated by Pacific Islands NMHS.

Contact your location Meteorology Service for site specific forecasts.

PICASO

PICASO (Pacific Island Countries Advanced Seasonal Outlook) is a PC-based seasonal prediction tool tailored for the Pacific Island countries jointly developed by APCC and SPREP through the ROK-PI CliPS project.

PICASO produces probabilistic forecasts of the seasonal mean rainfall of the given weather stations by customizing the data from the APCC dynamical seasonal prediction multi-model ensemble.

CLIK®

The rainfall and temperature forecasts are derived from a multi-model ensemble (MME) of all available Dynamical Models that are provided by WMO Global Producing Centers (GPCs) available on the Climate Services Toolkit for the Pacific (CLIK Pacific or CLIK®).

CLIK® is a product of the Republic of Korea-Pacific Islands Climate Prediction Services Project (ROK-PI CliPS).
